---

Grower/Litter/Compost Survey Results

73 Growers responded to the survey (37%)

54% of the growers would commit their litter to be composted.

Assuming this is a fair sample of how all our growers would respond, we would have 48,000 tons of litter committed/available for use. These growers would give the litter away if someone would remove it from the farms.

The remaining litter could be purchased from the farms or the growers had other uses for the litter.
